Rated output adjustment	The exact rated output is specified on the type plate. The sensor can be adjusted to an exact rated output of 2 mV/V. Then the relative tolerance of the rated output is dependent on the selected loading fittings. (see specifications, section "Rated electrical outputs"). You can connect the C6B in parallel if you order the sensor with adjusted rated output.
Transducer identification	Integration of TEDS chip (integrated electronic data sheet) as per IEEE 1451.4. If the relevant amplifier electronics are provided, the measurement chain will parameterize itself automatically.
Mechanical design	Standard delivery does not include load application parts. The C6B is optionally available with the appropriate load application parts and calibrated or adjusted.
Plug protection	A square profile is installed around the plug for mechanical protection. Dimensions WxHxD: 30 x 30 x 20 mm

Electrical connection	Permanently attached cable, 6 m is standard; options: Fixed cable, 15 m; bayonet connection (PT02E10-P-compatible); threaded connector (PT02E10-P-compatible); 8-pin M12 plug, A-coded.
Plug version for the "fixed cable" option	If you order your C6B with a fixed cable, it comes with free ends as standard. We are happy to mount connector plugs for connection to HBK measuring amplifiers, if requested. Y = Free ends, no plug fitted F = D-sub-HD15, 15-pin, for connection to MGC+ (e.g. AP01), Scout Q = HD-sub-HD15, 15-pin, for connection to many HBK measuring amplifiers of the Quantum series (MX410, MX440, MX840) N = MS plug, for connection to HBK measuring amplifiers such as MGC+ (AP03), DMP or DK38 P = ODU plug, 14-pin, degree of protection IP68, for connection to all HBK measuring amplifiers from the Somat XR series that are suitable for measuring full bridge circuits. M = M12 plug, 8-pin, suitable for measuring amplifiers digiBOX and DSE O = Without fixed cable
Integrated amplifier	The sensors can be purchased with an integrated amplifier, optionally delivering an output signal in volts or milliamps.
